LAMINATING

Powder Scattering Laminating Line - mod. LAP

The Powder Scattering Laminating Line – mod. LAP consists of:

- a powder distribution unit Mod. TDP/M
- a laminating unit Mod. GRA-1
- a pre-heating infrared lamp panel Mod. FIR-S
- a cooling group
- a rewinder
- motorization & control board

The main powder scattering laminating line advantages are:

- It is precise and there is a constant powder distribution
- Infrared temperature control precise, constant and uniform
- The fabric feeding system guarantees a constant tension of the products to be treated

TECHNICAL DATA

Table width to be defined

Useful width to be defined

Mechanical speed variable till 30 mtrs/'

Electric power 400 V ±5%, three-phase, 50 Hz – 175 kW

Compressed air $7 \pm bar$

Operation side to be defined

Cooling water temperature 15° max

Member of CISQ Federation
