PROFILES FLOCKING LINE

Caterpillar - mod. CTP800

Drive transmission is obtained with a special "Schmidt" joint.

A double row of grooved rollers inside the belts grants total and constant pressure all along.

For safety reasons, at machine stopping and/or at door opening, a pneumatic piston automatically lifts the upper belt 100 mm upwards, allowing for comfortable profile access and easy machine inspection.

Contact pressure between belts on the profile is obtained through a retractable cylinder and adjusted using a handwheel equipped with a gravimetric index.

TECHNICAL DATA

Belt width 100 mm

Useful belt contact 800 mm

length

Motorization 3 kW

Power supply 400 V/50 Hz/three-phase

Installed power 4 kW

Compressed air 7±1 Kg/cm²
